Change of name: Chemieanlagenbau Chemnitz to CAC ENGINEERING

Chemnitz, July 18, 2023: New name with proven content: After a successful phase of growth and further development, Chemieanlagenbau Chemnitz GmbH now operates under the new name CAC ENGINEERING GMBH.

The new name CAC ENGINEERING GMBH and the updating of our logo symbolize the bridging of tradition and progress.:

The past 60 years in which CAC expanded as a Chemnitz-based plant engineering company – nearly 20 of under the name Chemieanlagenbau Chemnitz GmbH, CAC for short - have seen them establish the fundamental values that characterise their core and brand: reliability, the human touch, experience and diversity. These are the values that have made CAC strong. They have helped to establish themselves internationally as a leading engineering services provider in the field of plant engineering and to form trust-based partnerships with their customers, business partners and employees.

"With the change of name, we are setting a milestone that signals our determination to remain amongst the market leaders in the future, to reinforce our values, offer innovative solutions and develop new markets", explains Joerg Engelmann, chairman of CAC ENGINEERING. This includes for example the fuel technology for the manufacture of climate neutral gasoline. Developed and realized more than 10 years ago, with the transition to large-scale industrial production they are now making a contribution to the climate of the future ([Link to the Press map of synthetic fuels from CAC](#)). .

Classic chemical plant engineering remains CAC's core business. As a part of the German company name, however, "Chemieanlagenbau" is no longer appropriate due to increasing technical requirements, digitalization and sustainability efforts. "We therefore want to focus on the essentials of our work: ENGINEERING," says Engelmann. The three letters CAC deliberately remain as the core of the brand. Both in the written context and in the logo, they symbolize the metamorphosis from tradition to innovation. "We were CAC - then as an abbreviation of our name - and we remain CAC - as an independent brand looking toward the future," Engelmann adds.
